

GENERAL ABILITY

Q. No. 1 – 5 Carry One Mark Each

1.	A stu	ident is required to	demon	strate a high	level of com	prehension o	f the subject	t, especially in	n the social
	The	word closest in mea	ning to	comprehens	ion is				
	(A)	understanding			(B)	meaning			
	(C)	concentration			(D)	stability			
Ans	wer:	(A)							
2.	Choo	ose the most approp	riate w	ord from the	options give	n below to co	mplete the f	ollowing sente	ence.
		of his biggest							
	(A)	vice	(B)	virtues	(C)	choices	(D)	strength	
Ans	wer:	(B)							
3.	Raja	n was not happy tha	t Sajan	decided to d	lo the project	on his own.	On observin	g his unhappi	ness, Sajan
		nined to Rajan that h							
	_	ch one of the statem			_	·	ed from the	above sentenc	es?
	(A)	Rajan has decided	to wo	rk only in a g	roup.				
	(B)	Rajan and Sajan w	ere for	rmed into a g	roup against	their wishes.			
	(C)	Sajan had decided	to giv	e in to Rajan	's request to	work with hir	n.		
	(D)	Rajan had believe	d that S	Sajan and he	would be wo	rking togethe	r.		
Ans	wer:	(D)							
4	If v -	$=5x^2+3$, then the ta	ngent	at v = 0 v =	3				
7.	(A)	passes through x =			(B)	has a slope of	of ⊥1		
	(C)	is parallel to the x			(D)	has a slope of			
Anc	wer:	(C)			(=)	516pc	-		
A113	wci.								

5. A foundry has a fixed daily cost of Rs 50,000 whenever it operates and a variable cost of Rs 800Q, where Q is the daily production in tonnes. What is the cost of production in Rs per tonne for a daily production of 100 tonnes?

Answer: (1300 to 1300)

Q. No. 6 - 10 Carry Two Marks Each

- **6.** Find the odd one in the following group: ALRVX, EPVZB, ITZDF, OYEIK
 - (A) ALRVX
- (B) EPVZB
- (C) ITZDF
- (D) OYEIK

Answer: (D)

7. Anuj, Bhola, Chandan, Dilip, Eswar and Faisal live on different floors in a six-storeyed building (the ground floor is numbered 1, the floor above it 2, and so on). Anuj lives on an even-numbered floor. Bhola does not live on an odd numbered floor. Chandan does not live on any of the floors below Faisal's floor. Dilip does not live on floor number 2. Eswar does not live on a floor immediately above or immediately below Bhola. Faisal lives three floors above Dilip. Which of the following floor-person combinations is correct?

	Anuj	Bhola	Chandan	Dilip	Eswar	Faisal
(A)	6	2	5	1	3	4
(B)	2	6	5	1	3	4
(C)	4	2	6	3	1	5
(D)	2	4	6	1	3	5

Answer: (B)

8. The smallest angle of a triangle is equal to two thirds of the smallest angle of a quadrilateral. The ratio between the angles of the quadrilateral is 3:4:5:6. The largest angle of the triangle is twice its smallest angle. What is the sum, in degrees, of the second largest angle of the triangle and the largest angle of the quadrilateral?

Answer: (180 to 180)

9. One percent of the people of country X are taller than 6 ft. Two percent of the people of country Y are taller than 6 ft. There are thrice as many people in country X as in country Y. Taking both countries together, what is the percentage of people taller than 6 ft?

(A) 3.0

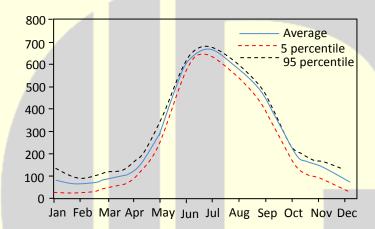

(B) 2.5

(C) 1.5

(D) 1.25

Answer: (D)

10. The monthly rainfall chart based on 50 years of rainfall in Agra is shown in the following figure. Which of the following are true? (k percentile is the value such that k percent of the data fall below that value)

- (i) On average, it rains more in July than in December
- (ii) Every year, the amount of rainfall in August is more than that in January
- (iii) July rainfall can be estimated with better confidence than February rainfall
- (iv) In August, there is at least 500 mm of rainfall

(A) (i) and (ii)

(B) (i) and (iii)

(C) (ii) and (iii)

(D) (iii) and (iv)

Answer: (B)

CHEMICAL ENGINEERING

Q. No. 1 – 25 Carry One Mark Each

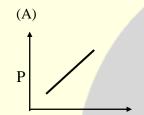

1.	Grad	ient of a scalar varia	able is	always				
	(A)	a vector	(B)	a scalar	(C)	a dot product	(D)	zero
A	nswer:	(A)						
2.	For t	the time domain fo	unction	$f(t) = t^2, wh$	nich ON	E of the following	g is th	e Laplace transform of
	$\int_{0}^{t} f(t)$							
	(A)	$\frac{3}{s^4}$	(B)	$\frac{1}{4s^2}$	(C)	$\frac{2}{s^3}$	(D)	$\frac{2}{s^4}$
A	nswer:	(D)						
3.	If f	*(x) is the comp	olex o	conjugate of f	(x) = 0	$\cos(x) + i \sin(x)$, ther	n for real a and b,
	$\int_{a}^{b} f *$	(x)f(x) dx is ALW	AYS?					
	(A)	Positive	(B)	Negative	(C)	Real	(D)	Imaginary
A	nswer:	(C)						
4.	If $f(x)$	() is a real and con	tinuou	s function of x,	the Tayl	or series expansion	of f(x	a) about its minima will
	NEV	ER have a term con	taining	g				
	(A)	first derivative			(B)	second derivative		
	(C)	third derivative			(D)	any higher derivat	tive	
A	nswer:	(A)						

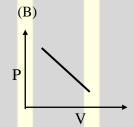

- 5. From the following list, identify the properties which are equal in both vapour and liquid phases at equilibrium
 - P. Density
 - R. Chemical potential
 - (A) P and Q only
 - (C) R and S only

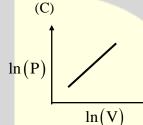

- Q. Temperature
- S. Enthalpy
- (B) Q and R only
- (D) P and S only

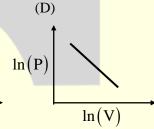

Answer: (B)

6. In a closed system, the isentropic expansion of an ideal gas with constant specific heats is represented by

Answer: (D)

7. Match the following:

Group-1	Group-2
$(P) \left(\frac{\partial G}{\partial n_i} \right)_{T,P,n_{jet}}$	I. Arrhenius equation
$(Q) \left(\frac{\partial G}{\partial n_i}\right)_{S,V,n_{jet}}$	II. Reaction equilibrium constant
(R) $\exp\left(\frac{-\Delta G_{\text{reaction}}^0}{RT}\right)$	III. Chemical potential
(S) $\Sigma (n_i d\mu_i)_{T,P} = 0$	IV. Gibbs-Duhem equation

(A) Q-III, R-I, S-II

(B) Q-III, R-II, S-IV

(C) P-III, R-II, S-IV

(D) P-III, R-IV, S-I

Answer: (C)

- 8. In order to achieve the same conversion under identical reaction conditions and feed flow rate for a nonautocatalytic reaction of positive order, the volume of an ideal CSTR is
 - always greater than that of an ideal PFR (A)
 - (B) always smaller than that of an ideal PFR
 - same as that of an ideal PFR (C)
 - (D) smaller than that of an ideal PFR only for first order reaction

(A) Answer:

- Integral of the time-weighted absolute error (ITAE) is expressed as 9.

(B) $\int_{0}^{\infty} \frac{|\varepsilon(t)|}{t} dt$ (D) $\int_{0}^{\infty} t^{2} |\varepsilon(t)| dt$

(C) $\int t |\varepsilon(t)| dt$

Answer: (C)

- A unit **IMPULSE** response of a first order system with time constant τ and steady state gain K_p is given **10.** by

- (B) $K_p e^{-t/\tau}$ (C) $\tau K_p e^{-t/\tau}$ (D) $\frac{K_p}{\tau} e^{-t/\tau}$

(D) Answer:

- 11. In a completely opaque medium, if 50% of the incident monochromatic radiation is absorbed, then which of the following statements are **CORRECT**?
 - 50% of the incident radiation is reflected (P)
 - 25% of the incident radiation is reflected (Q)
 - (R) 25% of the incident radiation is transmitted
 - **(S)** No incident radiation is transmitted
 - P and S only (A)
- (B) Q and R only
- (C) P and Q only
- R and S only (D)

Answer: **(A)**

12.	In case of a pressure driven laminar flow of a Newtonian fluid of viscosity (μ) through a horizontal circular pipe, the velocity of the fluid is proportional to									
	(A)	μ	(B)	$\mu^{0.5}$	(C)	$\mu^{^{-1}}$		(D)	$\mu^{-0.5}$	
Answ	er:	(C)								
13.	Whic	h of the following st	tateme	ents are CORR	RECT?					
	(P)	•				ases with	n time under	r a cor	nstant applied shear	
	(Q)	For a pseudoplastic stress	fluid	, the apparent	viscosity de	creases	with time un	nder a	constant applied sh	ıear
	(R)	For a Bingham plas	stic, th	e apparent vis	scosity incre	ases exp	onentially v	with th	ne deformation rate	
	(S)	For a dilatant fluid	, the a	pparent viscos	sity increases	s with in	creasing de	forma	ation rate	
	(A)	P and Q only	(B) Q	and R only	(C) R	and S o	nly	(D) P	and S only	
Answ	er:	(D)								
14.	of 10	me that an ordinary s. It is at a steady sta ant temperature ba	ate ten	nperature of 0	°C. At time	t = 0, th	e thermome	eter is	suddenly immersed	l in a
	appro (A)	eximately is 60	(B)	40	(C)	30		(D)	20	
Answ		(C)			(0)					
15.	Packe	ed towers are preferr	ed for	gas-liquid ma	ass transfer o	operation	ns with foan	ning li	iquids because	
	(A)	in packed towers, h	nigh li	quid to gas rat	ios are best	handled				
	(B)	in packed towers,				quid tak	es place			
	(C)	packed towers are			_	1				
	(D)	in packed towers, t	he gas	is not bubble	d through th	e Iiquid	pool			
Answ	er:	(D)								

1/20th of the diameter of the vessel. Under the steady state condition, the diffusive flux of toluene is maximum at (A) the surface of the liquid (B) the mid-plane of the vessel (C) the vent (D) a distance 20 times the diameter of the vent away from the vent Answer: (C) 17. In order to produce fine solid particles between 5 and 10 μm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO₂ from reformer gas (CO₂+H₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas Answer: (A)	10	6. As	A spherical storage vessel is quarter-filled with toluene. The diameter of the vent at the top of the vessel is							
(A) the surface of the liquid (B) the mid-plane of the vessel (C) the vent (D) a distance 20 times the diameter of the vent away from the vent Answer: (C) 17. In order to produce fine solid particles between 5 and 10 μm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas		1/2	th of the diameter of the vessel. Under the steady state condition, the diffusive flux of toluene is							
(B) the mid-plane of the vessel (C) the vent (D) a distance 20 times the diameter of the vent away from the vent Answer: (C) 17. In order to produce fine solid particles between 5 and 10 μm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas		ma	ximum at	num at						
(C) the vent (D) a distance 20 times the diameter of the vent away from the vent Answer: (C) 17. In order to produce fine solid particles between 5 and 10 μm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas		(A)	the surface of the liquid	he surface of the liquid						
(D) a distance 20 times the diameter of the vent away from the vent Answer: (C) 17. In order to produce fine solid particles between 5 and 10 µm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas		(B)	the mid-plane of the vessel							
Answer: (C) 17. In order to produce fine solid particles between 5 and 10 µm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas		(C)	the vent							
 17. In order to produce fine solid particles between 5 and 10 μm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO₂ from reformer gas (CO₂+H₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 		(D)	a distance 20 times the diameter of the ver	nt away from the vent						
 17. In order to produce fine solid particles between 5 and 10 μm, the appropriate size reducing equipment is (A) fluid energy mill (B) hammer mill (C) jaw crusher (D) smooth roll crusher 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO₂ from reformer gas (CO₂+H₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 	A	nswer:	(C)							
(A) fluid energy mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas										
(A) fluid energy mill (C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas	4			- 110						
(C) jaw crusher (D) smooth roll crusher Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas	17									
Answer: (A) 18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas										
18. Slurries are most conveniently pumped by a (A) syringe pump (B) diaphragm pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas		(C)) jaw crusher	(D) smooth roll crusher						
(A) syringe pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas	A	nswer:	(A)							
(A) syringe pump (C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas										
(C) vacuum pump (D) gear pump Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas	18	8. Slu	arries are most conveniently pumped by a							
Answer: (B) 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO ₂ from reformer gas (CO ₂ +H ₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas		(A)	syringe pump	(B) diaphragm pump						
 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO₂ from reformer gas (CO₂+H₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 		(C)	vacuum pump	(D) gear pump						
 19. Assuming the mass transfer coefficients in the gas and the liquid phases are comparable, the absorption of CO₂ from reformer gas (CO₂+H₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 	A	nswer:	(B)							
 CO₂ from reformer gas (CO₂+H₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 										
 CO₂ from reformer gas (CO₂+H₂) into an aqueous solution of diethanolamine is controlled by (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 	4									
 (A) gas phase resistance (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 	13									
 (B) liquid phase resistance (C) both gas and liquid phase resistances (D) composition of the reformer gas 				us solution of diethanolamine is controlled by						
(C) both gas and liquid phase resistances(D) composition of the reformer gas										
(D) composition of the reformer gas			• •							
Answer: (A)		(D)	composition of the reformer gas							
	A	nswer:	(A)							

- **20.** Which ONE of the following statements is CORRECT for the surface renewal theory?
 - (A) Mass transfer takes place at steady state
 - (B) Mass transfer takes place at unsteady state

Contact time is same for all the liquid elements

(C)

	(D)	Mass transfer depends only on the film resistance				
A	nswer:	(B)				
2	1. Ste	am economy of a multiple effect evaporator system is defined as				
	(A)	kilogram of steam used per hour				
	(B)	kilogram of steam consumed in all the effects for each kilogram of steam fed				
	(C)	kilogram of steam used in all the effects for each kilogram of water vaporized per hour				
	(D)	kilogram of water vaporized from all the effects for each kilogram of steam fed to the first effect				
A	nswer:	(D)				
2	2. De	composition efficiency (η_D) of an electrolytic cell used for producing NaOH is defined as				
	(A)	$\eta_{\rm D}$ = (grams of NaOH produced / grams of NaCl decomposed) x 100				
	(B)	η_D = (grams of NaOH produced / grams of NaCl charged) x 100				
	(C)	η_D = (gram equivalents of NaOH produced / gram equivalents of NaCl charged) x 100				
	(D)	η_D =(theoretical current to produce one gram equivalent / actual current to produce one gram				
		equivalent) x 100				
A	nswer:	(C)				
2	3. Th	e vessel dispersion number for an ideal CSTR is				
	(A)	-1 (B) 0 (C) 1 (D) ∞				
A	nswer:	(D)				
2	4. Ca	alytic cracking is				
	(A)	a hydrogen addition process (B) a carbon rejection process				
	(C)	an exothermic process (D) a coking process				
A	nswer:	(B)				

- **25.** Which ONE of the following statements is CORRECT?
 - The major components of biodiesel are triglycerides (A)
 - (B) Biodiesel is essentially a mixture of ethyl esters
 - (C) Biodiesel is highly aromatic
 - Biodiesel has a very low aniline point (D)

Answer: (B)

Q. No. 26 – 55 Carry Two Marks Each

Consider the following differential equation 26.

$$\frac{dy}{dx} = x + \ln(y); y = 2 \text{ at } x = 0$$

The solution of this equation at x = 0.4 using Euler method with a step size of h = 0.2 is _

(2.3 to 2.4) Answer:

The integrating factor for the differential equation 27.

$$\frac{dy}{dx} - \frac{y}{1+x} = (1+x)$$
 is

- (B) (1+x) (C) x(1+x) (D)

Answer:

- The differential equation $\frac{d^2y}{dx^2} + x^2 \frac{dy}{dx} + x^3y = e^x$ is a 28.
 - (A) non-linear differential equation of first degree
 - linear differential equation of first degree (B)
 - (C) linear differential equation of second degree
 - non-linear differential equation of second degree (D)

(B) Answer:

29. Consider the following two normal distributions

$$f_1(x) = \exp(-\pi x^2)$$

 $f_2(x) = \frac{1}{2\pi} \exp\left\{-\frac{1}{4\pi}(x^2 + 2x + 1)\right\}$

If μ and σ denote the mean and standard deviation, respectively, then

(A) $\mu_1 < \mu_2 \text{ and } \sigma_1^2 < \sigma_2^2$

(B) $\mu_1 < \mu_2 \text{ and } \sigma_1^2 > \sigma_2^2$

(C) $\mu_1 > \mu_2$ and $\sigma_1^2 < \sigma_2^2$

(D) $\mu_1 > \mu_2 \text{ and } \sigma_1^2 > \sigma_2^2$

(C) Answer:

30. In rolling of two fair dice, the outcome of an experiment is considered to be the sum of the numbers appearing on the dice. The probability is highest for the outcome of _____

(6.99 to 7.01)

- A spherical ball of benzoic acid (diameter = 1.5 cm) is submerged in a pool of still water. The solubility and diffusivity of benzoic acid in water are 0.03 kmol/m³ and 1.25 x 10⁻⁹ m²/s respectively. Sherwood number is given as $Sh = 2.0 + 0.6 \text{ Re}^{0.5} \text{Sc}^{0.33}$. The initial rate of dissolution (in kmol/s) of benzoic acid approximately is
 - (A) 3.54×10^{-11}
- (B) 3.54×10^{-12}
- (C) 3.54×10^{-13} (D) 3.54×10^{-14}

(B) Answer:

A wet solid of 100 kg is dried from a moisture content of 40wt% to 10wt%. The critical moisture content 32. is 15wt% and the equilibrium moisture content is negligible. All moisture contents are on dry basis. The falling rate is considered to be linear. It takes 5 hours to dry the material in the constant rate period. The duration (in hours) of the falling rate period is ______.

Answer: (1.1 to 1.3)

A brick wall of 20 cm thickness has thermal conductivity of 0.7 W m⁻¹ K⁻¹. An insulation of thermal **33.** conductivity 0.2 W m⁻¹ K⁻¹ is to be applied on one side of the wall, so that the heat transfer through the wall is reduced by 75%. The same temperature difference is maintained across the wall before and after applying the insulation. The required thickness (in cm) of the insulation is _____

(17.0 to 17.3) Answer:

An oil with a flow rate of 1000 kg/h is to be cooled using water in a double-pipe counter-flow heat 34. exchanger from a temperature of 70°C to 40°C. Water enters the exchanger at 25°C and leaves at 40°C. The specific heats of oil and water are 2 kJ kg⁻¹ K⁻¹ and 4.2 kJ kg⁻¹ K⁻¹, respectively. The overall heat transfer coefficient is 0.2 kW m⁻² K⁻¹. The minimum heat exchanger area (in m²) required for this operation is _____

(3.75 to 3.95) Answer:

Which **ONE** of the following is **CORRECT** for an ideal gas in a closed system? **35.**

(A)
$$\left(\frac{\partial U}{\partial V}\right)_{S} V = nR \left(\frac{\partial U}{\partial S}\right)_{V}$$

(B)
$$-\left(\frac{\partial H}{\partial P}\right)_{S} P = nR\left(\frac{\partial H}{\partial S}\right)_{P}$$

(C)
$$\left(\frac{\partial U}{\partial V}\right)_{S} V = nR \left(\frac{\partial H}{\partial S}\right)_{I}$$

(D)
$$\left(\frac{\partial H}{\partial P}\right)_{S} P = nR\left(\frac{\partial U}{\partial S}\right)_{S}$$

(D) Answer:

A binary distillation column is operating with a mixed feed containing 20 mol% vapour. If the feed quality 36. is changed to 80 mol% vapour, the change in the slope of the q-line is _____.

(3.6 to 3.9) Answer:

A homogeneous reaction $(R \to P)$ occurs in a batch reactor. The conversion of the reactant R is 67% after 10 minutes and 80% after 20 minutes. The rate equation for this reaction is

$$(A) - r_{R} = k$$

$$(B) - r_{R} = kC_{R}^{2}$$

$$(B) - r_R = kC_R^2 \qquad (C) - r_R = kC_R^3$$

$$(D) - r_R = kC_R^{0.5}$$

Answer: (B)

A vapour phase catalytic reaction $(Q + R \rightarrow S)$ follows Rideal mechanism (R and S are not adsorbed). **38.** Initially, the mixture contains only the reactants in equimolar ratio. The surface reaction step is rate controlling. With constants a and b, the initial rate of reaction $(-r_0)$ in terms of total pressure (P_T) is given by

(A)
$$-\mathbf{r}_0 = \frac{aP_T}{1 + bP_T}$$

(B)
$$-r_0 = \frac{aP_T}{1 + bP_T^2}$$

(C)
$$-r_0 = \frac{aP_T^2}{1 + bP_T}$$

.....

(A)
$$-r_0 = \frac{aP_T}{1 + bP_T}$$
 (B) $-r_0 = \frac{aP_T}{1 + bP_T^2}$ (C) $-r_0 = \frac{aP_T^2}{1 + bP_T}$ (D) $-r_0 = \frac{aP_T^2}{\left(1 + bP_T\right)^2}$

(C) Answer:

A incompressible fluid is flowing through a contraction section of length L and has a 1-D (x direction) steady state velocity distribution, $u = u_0 \left(1 + \frac{2x}{L} \right)$. If $u_0 = 2m/s$ and L = 3m, the convective acceleration (in m/s²) of the fluid at L is

(7.99 to 8.01) Answer:

Match the following: 40.

	Group - 1		Group - 2
(P)	Tank in series model	(I)	Non-isothermal reaction
(Q)	Liquid-liquid extraction	(II)	Mixer-settler
(R)	Optimum temperature progression	(III)	PFR with axial mixing
(S)	Thiele modulus	(IV)	Solid catalyzed reaction

(A) P-II, Q-IV, R-I, S-III

(B) P-I, Q-II, R-III, S-IV

(C) P-III, Q-I, R-II, S-IV (D) P-III, Q-II, R-I, S-IV

Answer: **(D)**

Two elemental gases (A and B) are reacting to form a liquid (C) in a steady state process as per the 41. reaction. $A + B \rightarrow C$. The single-pass conversion of the reaction is only 20% and hence recycle is used. The product is separated completely in pure form. The fresh feed has 49 mol% of A and B each along with 2 mol% impurities. The maximum allowable impurities in the recycle stream is 20 mol%. The amount of purge stream (in moles) per 100 moles of the fresh feed is _____

Answer: (9.99 to 10.01) 42. Carbon monoxide (CO) is burnt in presence of 200% excess pure oxygen and the flame temperature achieved is 2298 K. The inlet streams are at 25 °C. The standard heat of formation (at 25 °C) of CO and CO₂ are -110kJ mol⁻¹ and -390kJ mol⁻¹, respectively. The heat capacities (in J mol⁻¹ K⁻¹) of the components are

$$C_{p_{O_2}} = 25 + 14 \times 10^{-3} T$$
 $C_{p_{CO_2}} = 25 + 42 \times 10^{-3} T$ where,

T is the temperature in K. The heat loss (in kJ) per mole of CO burnt is_____.

Answer: (32.0 to 38.0)

43. A cash flow of Rs. 12,000 per year is received at the end of each year (uniform periodic payment) for 7 consecutive years. The rate of interest is 9% per year compounded annually. The present worth (in Rs.) of such cash flow at time zero is ______.

Answer: (60000 to 61000)

44. A polymer plant with a production capacity of 10,000 tons per year has an overall yield of 70%, on mass basis (kg of product per kg of raw material). The raw material costs Rs. 50,000 per ton. A process modification is proposed to increase the overall yield to 75% with an investment of Rs. 12.5 crore. In how many years can the invested amount be recovered with the additional profit? ______.

Answer: (2.55 to 2.70)

45. A step change of magnitude 2 is introduced into a system having the following transfer function :

$$G(s) = \frac{2}{s^2 + 2s + 4}$$

The percent overshoot is _____.

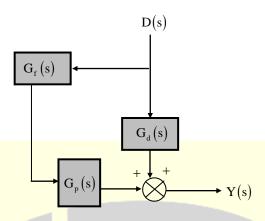

Answer: (16.0 to 16.8)

46. Given below is a simplified block diagram of a feedforward control system.

The transfer function of the process is $G_P = \frac{5}{s+1}$ and the disturbance transfer function is $G_d = \frac{1}{s^2 + 2s + 1}$.

The transfer function of the **PERFECT** feed forward controller, $G_f(s)$ is

(A)
$$\frac{-5}{(s+1)^3}$$

(B)
$$\frac{-5}{(s+1)}$$

$$(C) \frac{-1}{5(s+1)}$$

(D)
$$-5(s+1)$$

Answer: (C)

47. The bottom face of a horizontal slab of thickness 6 mm is maintained at 300°C. The top face is exposed to a flowing gas at 30°C. The thermal conductivity of the slab is 1.5 W m⁻¹K⁻¹ and the convective heat transfer coefficient is 30 W m⁻²K⁻¹. At steady state, the temperature (in °C) of the top face is ______.

Answer: (268 to 274)

48. In a steady incompressible flow, the velocity distribution is given by $\overline{V} = 3x\hat{1} - Py\hat{J} + 5z\hat{k}$, where, V is in m/s and x, y, and z are in m. In order to satisfy the mass conservation, the value of the constant P (in s⁻¹) is

Answer: (7.99 to 8.01)

49. Match the following:

	Group I	Group II
(P)	Turbulence	(I) Reciprocating pump
(Q)	NPSH	(II) Packed bed
(R)	Ergun equation	(III) Fluctuating velocity
(S)	Rotameter	(IV) Impeller
(T)	Power number	(V) Vena contracta

(A) P-III, R-II, T-IV

(B) Q-V, R-II, S-III

(C) P-III, R-IV, T-II

(D) Q-III, S-V, T-IV

Answer: (A)

50. In a steady and incompressible flow of a fluid (density = 1.25 kg m⁻³), the difference between stagnation and static pressures at the same location in the flow is 30 mm of mercury (density = 13600 kg m⁻³). Considering gravitational acceleration as 10 m s⁻², the fluid speed (in m s⁻¹) is ______.

Answer: (79 to 82)

51. Consider a binary liquid mixture at equilibrium with its vapour at 25°C. Antoine equation for this system is given as $\log_{10} p_1^{\text{sat}} = A - \frac{B}{t+C}$ where t is in °C and p in Torr.

The Antoine constants (A, B, and C) for the system are given in the following table.

Component	A	В	C
1	7.0	1210	230
2	6.5	1206	223

The vapour phase is assumed to be ideal and the activity coefficients (γ_i) for the non-ideal liquid phase are given by

$$\ln(\gamma_1) = x_2^2 [2 - 0.6x_1]$$

$$\ln(\gamma_2) = x_1^2 [1.7 + 0.6x_2]$$

If the mole fraction of component 1 in liquid phase (x_1) is 0.11, then the mole fraction of component 1 in vapour phase (y_1) is ______

Answer: (0.65 to 0.75)

52. A process with transfer function, $G_p = \frac{2}{s-1}$ is to be controlled by a feedback proportional controller with a gain K_c . If the transfer functions of all other elements in the control loop are unity, then which **ONE** of the following conditions produces a stable closed loop response?

(A) $K_C = 0.25$

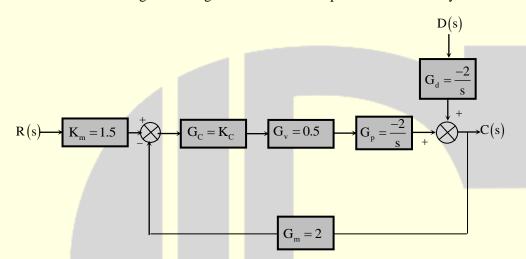

(B) $0 < K_C < 0.25$

(C) $0.25 < K_C < 0.5$

(D) $K_C > 0.5$

Answer: (D)

53. Consider the following block diagram for a closed-loop feedback control system

A proportional controller is being used with $K_C = -4$. If a step change in disturbance of magnitude 2 affects the system, then the value of the offset is _____.

Answer: (0.49 to 0.51)

54. Determine the correctness or otherwise of the following Assertion [a] and Reason [r].

Assertion: Significant combustion of coke takes place only if it is heated at higher temperature in presence of air.

Reason: $C + O_2 \rightarrow CO_2$ is an exothermic reaction.

- (A) Both [a] and [r] are true and [r] is the correct reason for [a]
- (B) Both [a] and [r] are true but [r] is not the correct reason for [a]
- (C) [a] is correct but [r] is false
- (D) Both [a] and [r] are false

Answer: (B)

55. Match the raw materials of Groups 1 and 2 with the final products of Group 3

Group 1	Group 2	Group 3
P ₁ : Ethylene	Q ₁ : Ammonia	R ₁ : Synthetic fibre
P ₂ : Propylene	Q ₂ : 1-Butene	R ₂ : Nylon 66
P ₃ : Adipic acid	Q ₃ : Ethylene glycol	R ₃ : LLDPE
P ₄ : Terephthalic acid	Q ₄ : Hexamethylene diamine	R ₄ : Acrylonitrile

(A)
$$P_1 + Q_2 \rightarrow R_3$$
; $P_2 + Q_1 \rightarrow R_4$; $P_3 + Q_4 \rightarrow R_2$; $P_4 + Q_3 \rightarrow R_1$

(B)
$$P_1 + Q_1 \rightarrow R_3$$
; $P_2 + Q_3 \rightarrow R_4$; $P_3 + Q_4 \rightarrow R_4$; $P_4 + Q_2 \rightarrow R_2$

(C)
$$P_1 + Q_2 \rightarrow R_2$$
; $P_2 + Q_3 \rightarrow R_1$; $P_3 + Q_4 \rightarrow R_3$; $P_4 + Q_1 \rightarrow R_4$

(D)
$$P_1 + Q_1 \rightarrow R_4; P_2 + Q_2 \rightarrow R_3; P_3 + Q_4 \rightarrow R_2; P_4 + Q_3 \rightarrow R_1$$

Answer: (A)
